

CARBON CAPTURE WILL STOP CLIMATE CHANGE*

*CARBON CAPTURE WILL NOT ACTUALLY STOP CLIMATE CHANGE

Hi there caring consumer! Thank you for expressing interest in a COyou2 catalogue.

Unfortunately, we can't show you a catalogue.

That's because COyou2 doesn't exist.

And that's because we're not a company, we're a bunch of people from Australia who used to be housemates.

We're very concerned about climate change. But we don't think a personal carbon capture system would adequately address the problem.

Just like this website is a hoax, governments and big business are putting forward their own hoaxes to get themselves off the hook. The concept of clean coal and carbon capture is one such hoax. So is [carbon trading](#) and [carbon offset schemes](#). So is [nuclear power](#). So are [biofuels](#).

Big business and governments might like us to think that the only way to stop climate change is for consumers to choose better products. It's called greenwashing. If we all put in our bit, the message goes, by changing enough light bulbs, leaving the car at home, installing solar panels on our roofs and so on, the worst aspects of climate change could be ameliorated, the free market could carry on, corporations could continue mining coal, and we and the planet will be happy.

Don't get us wrong - all of these things are part of the solution. But they're not *the* solution. This is an emergency, and with less than ten years to avert catastrophic global warming, we need a society-wide effort to break the power that fossil fuel companies, big polluters and the governments taking their side have over the way the planet is being run.

We think that individuals do have a part to play in stopping climate change - but that we are stronger working together than simply changing our shopping habits. After all, there's only four of us, and 6.7 billion of you!

To find out how you can get involved in the growing social movement against climate change, [click here](#).

Read more about why clean coal is a hoax [here](#). Read more about why green consumerism is a hoax [here](#).

To read more about what real action to stop global warming would look like, [click here](#).

For examples of how renewable energy can replace fossil fuel use, click [here](#) and [here](#).

Here are some other websites that you might like to check out: [Climate Code Red](#), and [Climate and Capitalism](#)

Reply to this email if you'd like to find out how to really be part of the solution, abuse us for being fraudulent liars, or absolutely insist that you receive a COyou2 catalogue.
